

We are pleased to announce that ESNO Summit will take place in Brussels.

We can observe a changing health care environment. The health care demand is rising and medical specialists alone cannot respond to it. The population is getting older, the health state is more complex with comorbidities to take into account. The development of higher medical technologies and more sophisticated treatment require nurse specialists in advanced practice roles at master, post master level.

We move more and more from a hospital care setting to a home, community, outpatient care setting with the development of ambulatory surgery, oral therapy, the hospital care setting dedicated to the acute care and home/community care to the follow up, long term care. This necessitate to review our organization where nurse specialists have a crucial role to play.

Our second summit will address this topic and will explore with you how specialist specialists can respond to this very challenging issue. This event is unique in Europe gathering all European nurse specialists under one same roof. A place to exchange and get to know each other and you can be sure that you will go home with a luggage full of new perspectives, knowledge, networking .

With our members, I will be very happy to welcome you the 30st of November in Brussels; make it happen and come !

Francoise Charnay-Sonnek.
President.

Title :
